Back to the Future

- *"I like the dreams of the future better than the history of the past"* Thomas Jefferson
- I hope I leave you with the feeling that physics is only just beginning and the future of physics, while unpredictable, looks more promising of new and exciting discoveries than at any prior time in history. The future is for the young and daring to encompass and develop. I envy those of you who are just beginning the great adventure!
- **The wonderful people of Poland, The inspiration of the young THANK YOU! Dziękuję bardzo!**
